

Chamroeun Hongleng

Software engineering student building tested full-stack products, backend systems, and machine-learning tools.

Phnom Penh, Cambodia · chamroeunhongleng825@gmail.com · chamroeunhongleng.me · GitHub · Hugging Face · LinkedIn

Seeking a software engineering internship · Phnom Penh or remote

PROJECTS

PhsarOS — operations platform for small shops · main builder Jul 2026 — present
Next.js 15 (App Router, RSC, Server Actions) · TypeScript · Prisma · PostgreSQL · Auth.js · Zod · phsaros.vercel.app

- Live multi-tenant product: signup, point of sale, inventory, customers, expenses, and a server-computed dashboard. Anyone can sign up and complete a real sale.
- Tenant isolation in the query layer, Zod-validated Server Actions, atomic sales, an eight-model Prisma schema, and Vitest with typechecking in CI. Authored 59 of the project's 63 commits.

chamroeunhongleng.me — schema-validated content system · sole builder Aug 2026 — present
Nuxt 4 · TypeScript · Zod · design tokens · Vitest · GitHub Actions + CodeQL · Vercel · source (public)

- Content in JSON validated by Zod schemas, with routes and the sitemap derived from it; one shared rule engine fails production builds on any unresolved placeholder.
- 99 unit tests, a twelve-phase verification pipeline, GitHub Actions and CodeQL, and an assistant whose answers are graded by automated evaluations.

Kaskor ASR — Khmer speech recognition · sole builder 2026 — present
Python · PyTorch · Hugging Face Transformers · Whisper-small · MIT · github.com/chamroeunhongleng/kaskor-asr

- Eleven-script pipeline from raw audio to trained model over ~86,500 samples, plus a pip-installable CLI and a published model card.
- Identified and fixed a 225-token evaluation cap that truncated model output, correcting the self-reported CER from 17.48% to 3.74% on a speaker-overlapping validation split.

Chomkar Decision Grid — deterministic decision engine · sole builder 2026 — present
Python (stdlib only) · unit tests · GitHub Actions · MIT · github.com/chamroeunhongleng/chomkar-decision-grid

- Audit stage re-derives every result through independent code paths; 62 unit tests over invariants and designed failure paths, run in CI.

EXPERIENCE

CHNAI LAB — student product studio · software developer and organization administrator 2026 — present

- Build and maintain PhsarOS, the studio's shop-operations product, and administer its GitHub organization. Products are divided between six members under shared contribution, security, and AI-use standards.
- On Chomkar, the studio's agritech product: provide the Khmer voice-intake model the team builds against — my own Kaskor ASR, served from my Hugging Face account and used in the hackathon demo — plus ~30 farmer interviews and the business analysis behind its pre-harvest order model.

SKILLS

WEB	TypeScript, Next.js (App Router, RSC, Server Actions), Nuxt 4 / Vue, React, Tailwind
BACKEND	PostgreSQL, Prisma, Auth.js with JWT, Zod validation, multi-tenant isolation, serverless
ML	Python, PyTorch, Hugging Face Transformers, Whisper fine-tuning, evaluation design
AI-NATIVE PRACTICE	AI-assisted development under written repository contracts, AI workflow design, automated model evaluation
PRACTICE	Git, GitHub Actions CI, Vitest and pytest, strict typechecking, ESLint, CodeQL, Vercel
LANGUAGES	Khmer — native; English — intermediate (B1–B2), studying B.A. English for Work Skills

EDUCATION

American University of Phnom Penh / Fort Hays State University — dual degree: B.S. Oct 2025 — present
Information Technology Management and B.S. Computer Science

Institute of Foreign Languages, RUPP — B.A. English for Work Skills (international business) Jan 2026 — present
